To our families

The publication of this technical specialized book was realized by the support of the project by “The European Commission – Directorate-General for Education and Culture”, SOCRATES Programme, ERASMUS – “Harmonization of Electrical Power Engineering Curricula (HEPEC)” Number – 51707-IC-3-2002-1-CZ-ERASMUS-MODUC-1.

The Authors wish to thank to Ing. Dvorský Emil, CSc., Ing. Hejtmánková Pavla, Ph.D. and Ing. Noháčová Lucie, Ph.D., who have taken part in the translation, proofreading, illustrations, graphics and publication of this book.

Contents

1 Steady state in the power system	9
1.1 Distribution network solution	9
1.1.1 Distribution network topology	10
1.1.2 Method of node voltages (MNV)	15
1.1.3 Method of loop currents (MLC)	21
1.2 Steady state solution in the power system	29
1.2.1 Models of the power system elements for the steady state calculation	29
1.2.2 Node classification in the power system.....	32
1.2.3 Mathematical steady state model of the power system	33
1.2.4 Steady state calculation with the aid of Gauss elimination method	39
1.2.5 Steady state calculation with the aid of Gauss-Seidl method	46
1.2.6 Steady state calculation with the aid of Newton iteration method	52
1.2.7 Calculation of required reactive power injected in network nodes needed for keeping the specified voltage	58
1.3 Steady state solution in complex power system	62
1.4 Current and power distribution in branches and network active power losses determination.....	68

1.4.1	Power losses	72
1.4.2	Losses calculation in networks as a node power output function	75
1.4.3	Operating state optimization in electric networks	81
1.4.3.1	Operating state in electric network optimization	82
1.4.3.2	Optimization methods	82
1.4.3.3	Method of reduced gradient	84
2	Short-Circuit-Strength of Operating Electrical Equipment.....	88
2.1	Basic considerations	88
2.2	Mechanical Short-Circuit-Strength	90
2.2.1	Electrodynamic Current Forces	90
2.2.1.1	Physical Principle	91
2.2.1.1.1	Energy Balance Method	91
2.2.1.1.2	Biot-Savart-Method	93
2.2.1.2	Short-circuit Forces	101
2.2.2	Mechanical Stress and Strength	106
2.2.2.1	Bus-bar Arrangement	108
2.2.2.2	Supporting Insulators	112
2.2.2.3	Ropes and Cables	113
2.3	Thermal Short-Circuit-Strength	114
3	Literature and References	123
